How We Work

We are a team that's flexible and versatile to offer truly a service well tailored for minutest details. Our process is structured such that we instantly adapt to the requirements of each client. And above all, our goal remains to make our client's experience with Classic Informatics a DELIGHT.

There are various models from which clients can decide upon to kick-start the project. These define the resources, time and costing and form as a good structure and base for planning and execution. In some cases, the projects can be a combination of two or more models.

Fixed Cost Model

- The scope of a fixed cost model is very well-defined.
- Any changes in scope are estimated separately and require budget approval from the customer.
- The project is straightforward with little or no external dependencies.
- The customer are billed on defined milestones and this model works best for well-defined, small to mid-scale projects.

Time Material Model

- The scope of the Time Material Model is defined tentatively, and evolves as the process moves forward.
- The project can be complex with a lot of integrations and external dependencies.
- The customer is billed bi-weekly or monthly with supporting timesheets.
- This model works well for any size of project.

Dedicated Hiring Model

- Dedicated resources working from our Offshore Development Centre are assigned to the customer in a Dedicated Hiring Model.
- Project management and task management are both handled by the customer directly. Herein the resources act as Virtual Employees.
- The customer is billed a fixed price for each resource on a monthly basis.
- The Dedicated Hiring Model is best for companies with in-house IT staff to manage and direct projects.

Web 2.0, Social Media & Rich Internet Applications

Web 2.0 design and development

Web 2.0 defines the second-generation web applications, including social networking websites, niche communities, wikis, blogs, business productivity tools and many more. The two very important aspects of Web 2.0 applications are the design and the UI usability. Keeping up with the technology, CIPL has mastered that. Our designers and developers are fully equipped to deliver state-of-the-art and innovative Web 2.0 applications. Some of our Web 2.0 solutions include :

- Web 2.0 Product Development
- Web 2.0 Development for Productivity Tools
- Social Networking and Community Website Development
- Custom Web 2.0 Application Development
- UI Planning and Designing

Flex Programming and Rich Internet Applications

RIAs are mainly those web applications that work like a desktop applications on the web. CIPL has extensive experience in delivering high performance Rich Internet Applications. We specialize in Flex and Flash Development using Action Scripting. Some of our RIA solutions include :

- eLearning and Online Conferencing Tools

- Magento and osCommerce deployment and Customization

iPhone and Mobile Development Solutions

iPhone and iPad Apps

iPhone has been a radical innovation in the mobile industry. CIPL's mobile development experts specialize in building amazing applications for the iPhone, iPod Touch and iPad. Our team follows the Human Interface guidelines outlined by Apple to design the application interfaces. Some of our iPhone and iPad solutions include :

- Submitting applications to App Store.
- Application Interaction with Social Network Sites like Facebook, Twitter, MySpace.
- GPS/Location based applications. Integrated Google Maps within the application.
- Audio/Video Content Streaming on iPhone.
- Client-Server Enterprise applications. XML, JSON as communication format.
- Effective use of SQLite for storing data within the device and syncing it with the central database on the server.
- Use of Push Notification API to send alerts to the application users from server even when the application is inactive/closed.

Windows Mobile Development Solutions

Windows Mobile is one of the most popular mobile OS. CIPL has expertise in developing state-of-art Windows Mobile applications using C++, .NET Compact Framework and C#. Our services include migration and porting of applications from other mobile platform to Windows Mobile platform.

BlackBerry Apps

CIPL specializes in creating BlackBerry Applications using the RIM APIs. Our team expertises in creating applications which are compatible with different BlackBerry OS and models. The apps are also adjustable across the variable display screens. We follow the guidelines set by RIM to submit application on the BlackBerry App World. Some of our solutions include :

- Creating applications with native look and feel.
- Pinpointing Locations on Maps. Utilizing native Blackberry Maps to display Landmarks.
- Application's connectivity with server using all possible connection types in blackberry like BIS, MDS, Wi-fi, and more.
- Multimedia Apps like playing audio/video from server.

Android Apps

Android platform is the latest addition to the smart phones helping users to completely tailor the phone to their interest. It is also the latest addition to our mobile development expertise. The applications are developed using Java Programming Language. A core set of frameworks and libraries includes C/C++ libraries System C library, Media Libraries, Surface Manage, Lib Web Core, SGL, 3D libraries, Free Type & SQLite. Our solutions on Android platform include social networking applications, business utilities and productivity apps.

Enterprise Web Application, Cloud Computing & Saas

Enterprise Web Applications

Enterprise Web Applications comprises of the advancement of corporations to richer and more effective web based applications. CIPL provides the best and most innovative Enterprise Web Applications and Solutions to clients. Some of our solutions include, Project Management Systems, CRM, eHRMS, Print Management, web based ERP, Intranets and Order Management Systems, Healthcare Solutions and Workflow Management Systems.

Microsoft .NET

Microsoft .NET has been the ideal choice for portals and enterprise applications alike. It offers an ecosystem apt for scalable and large applications. Our developers have expertise in implementing n-tier distributed architecture, service-oriented architecture (SOA), and client-server architecture by leveraging Microsoft .NET Technology. We work in .NET Framework (2.0, 3.0 and 3.5) using C#, ASP.NET, VB.NET and Visual Studio. Our experts work with latest industry standards, Microsoft Enterprise Library Blocks, Pattern & Practices and integrating with third party components.

MOSS Consulting and Implementation

CIPL boosts businesses by leveraging SharePoint to deploy their extranet, intranet, collaboration platforms and any other customized portals. SharePoint helps companies to lower the cost of deploying collaboration platforms. Our services include branding solutions like customization of the look and feel, customization of web part development and implementation consulting.

SaaS Product Development

Software as a Service is an industry that's booming and growing at the rate of 25% annually. Today companies opt for SaaS offerings primarily due to the low cost. Developing SaaS applications is very different from traditional application development. Data of multiple customers is hosted at one place and therefore security and scalability becomes very important. CIPL specializes in developing and maintaining SaaS offerings.

Amazon AWS Implementation and Monitoring

With focus shifting to social media, video streaming and SaaS solutions, infrastructure management for web applications has become more complicated and difficult to scale than ever. Amazon offers a perfect ecosystem for Content Hosting, Content Delivery, Server Auto Scaling and Load Balancing. The Infrastructure team @ CIPL has extensive experience working with various Amazon AWS products. We offer round the clock monitoring of your Amazon infrastructure.

Salesforce and Force platform Consulting

SalesForce.com was one of the first SaaS Solution offering turnkey CRM solution. Now it also aids businesses to leverage the power of hosted platforms and is a complete ready to go ecosystem. Hosted platforms and complex workflow oriented applications can be easily deployed and customized using SalesForce.com and force.com platform. CIPL specializes in SDFC solutions helping businesses understand the ecosystem and implement solutions to reduce the overall costing and boosting the productivity.
